

AI for Beginners (Zero to Hero)

Everything you need to know to get started with AI

Quick Reference Cheat Sheet • AILearnHub.IO

KEY AI TERMS

Artificial Intelligence (AI)	Technology that enables computers to perform tasks that normally require human intelligence.
Machine Learning (ML)	AI that learns patterns from data without being explicitly programmed for each task.
Deep Learning	ML using multi-layered neural networks — the engine behind image recognition, chatbots, and more.
Large Language Model (LLM)	AI trained on massive text datasets to understand and generate human language (e.g., GPT-4, Claude).
Generative AI	AI that creates new content — text, images, audio, video, or code — based on patterns it learned.
Prompt	The instruction or question you give to an AI tool to get a response.
Natural Language Processing	Branch of AI that enables computers to understand and generate human language.
Neural Network	A computing system loosely inspired by the human brain, made of layers of interconnected nodes.
Training Data	The dataset used to teach an AI model. Bigger and better data = better AI.
Hallucination	When AI confidently generates false or inaccurate information. Always verify AI outputs.

TYPES OF AI TOOLS

Text / Writing	Write, edit, summarise, translate	ChatGPT, Claude, Gemini
Image Generation	Create images from text prompts	Midjourney, DALL-E, Adobe Firefly
Voice & Audio	Clone voices, transcribe, generate speech	ElevenLabs, Whisper, Descript
Code Assistants	Write, debug, and explain code	GitHub Copilot, Cursor, Replit AI
Video Creation	Generate or edit videos with AI	Runway, Sora, Pika
Productivity	Automate tasks, summarise meetings	Notion AI, Otter.ai, Microsoft Copilot

Search / Research	AI-powered web search and answers	Perplexity, You.com, Google AI Mode
-------------------	-----------------------------------	-------------------------------------

10 STARTER PROMPTS TO TRY TODAY

Explain a concept	"Explain [topic] in simple terms as if I'm 12 years old."
Summarise anything	"Summarise the following text in 5 bullet points: [paste text]"
Write an email	"Write a professional email to [person] about [topic]. Keep it under 150 words."
Brainstorm ideas	"Give me 10 creative ideas for [project/goal]."
Fix my writing	"Rewrite the following paragraph to sound more professional: [your text]"
Create a plan	"Create a step-by-step 30-day plan to help me learn [skill]."
Research a topic	"What are the top 5 things I need to know about [topic]?"
Write social content	"Write 3 LinkedIn posts about [topic] in a friendly, engaging tone."
Roleplay an expert	"Act as an expert [role]. Answer my questions about [topic]."
Translate & simplify	"Translate this technical content into plain English: [paste content]"

Pro Tip: Always review AI output before using it. AI tools can make mistakes — treat them as a smart assistant, not a source of truth.

DO'S AND DON'TS FOR AI BEGINNERS

Prompts	Be specific and detailed	Ask vague one-word questions
Output	Verify facts with real sources	Trust AI output blindly
Privacy	Use dummy data when testing	Share passwords or sensitive data
Iteration	Refine prompts if results miss	Give up after one bad response
Learning	Experiment daily with new tools	Assume AI does everything perfectly
